

1.

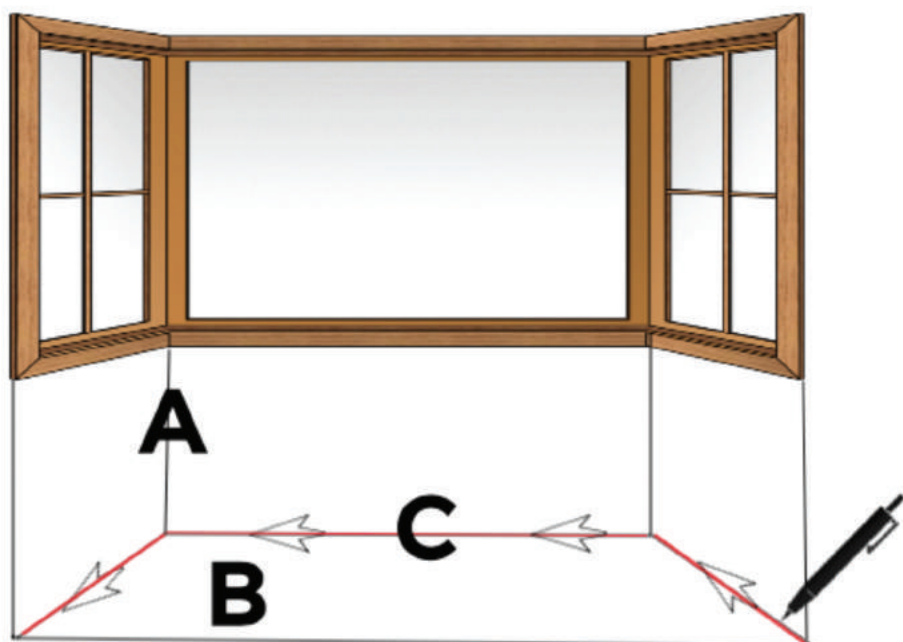

Chose the size of radiator needed by measuring length of the angled wall (A to B) then from skirting to bay window ledge (C to D)

2.

Lay lining /wallpaper over A and B and gently fold the shape of the angled wall along line C (using a pen may help you) making sure it's folded into all angles. This folded line will act as the cutting line for your template. Remember this template will be the exact shape/ size of your angled radiator so make sure you go to the end of the wall.

3.

Carefully cut along line B (folded line) so you are left with your template (A). Fold up your template and carefully put in a large envelope along with your full contact details, type of radiator and send to the below address

Angell Welding,  
273 King Henry's Drive,  
New Addington,  
Croydon,  
CR0 0AE
